$$\begin{array}{c} |\mathcal{N}| | |\mathcal{N}| |\mathcal{N}| | |\mathcal{N}|$$

$$Z_{0} = \begin{bmatrix} 0.5 \\ -35.5 \end{bmatrix} \qquad \mathcal{J}(Z_{0}) = \begin{bmatrix} -134,099 \\ -30,899 \\ -50,899 \\ -56,892 \\ -56,892 \\ -56,892 \\ -56,893 \\ -56,9338311 \\ -139,50014 \\ -51,800043 \\ -61,8$$

Input interpretation

$$9(-8+x)^2 + 15 y = 8$$

$$(-16+x)^2 + (7+y)^2 = 1089$$

Results

$$x \approx 0.199895 \land y \approx -35.9717$$

$$x \approx 16.2191 \land y \approx -39.9993$$

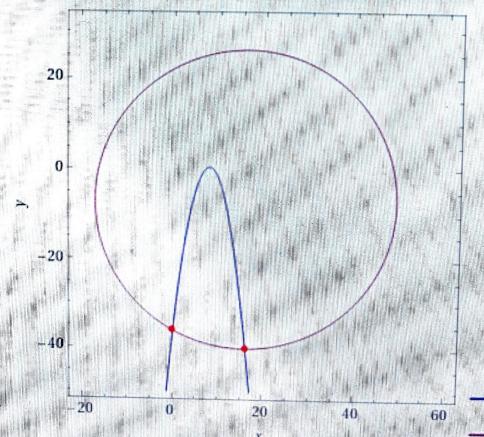

$$x \approx 7.79048 - 6.47368 i \land y \approx 25.6521 - 1.62764 i$$

$$x \approx 7.79048 + 6.47368 i \land y \approx 25.6521 + 1.62764 i$$

$$-9(x-8)^2+15y=8^4$$

$$-(x-16)^2+(y+7)^2=1089$$
